

Jishnu Prasad

Senior Site Reliability Engineer

📞 +91-7736841008 — ✉ jishnu.prasad4@gmail.com — 🌐 linkedin.com/in/j1shnu — 🌐 jishnu.cloud — 📍 India (Open to Relocation)

Summary

8 years building platforms that teams can trust under pressure. Progressed from Linux systems administration through AWS escalation engineering to leading reliability across 100+ Kubernetes clusters. Deep hands-on experience in infrastructure automation, observability, and incident response, with a bias toward systems that stay predictable at scale.

Skills

Cloud & Infra: AWS (EC2, IAM, VPC, RDS, EKS), CloudFormation, Terraform, Ansible, GCP, DigitalOcean

Containers & Orchestration: Kubernetes, Docker, Spinnaker, Helm, HPA

Databases & Web: PostgreSQL, MySQL, MongoDB, Redis, NGINX, Apache, CDN(Cloudflare, Cloudfront)

CI/CD: Jenkins, GitHub Actions, Bitbucket Pipelines, ArgoCD

OS: Linux (RHEL, Ubuntu, SLES, Amazon Linux)

Languages: Python, Bash, Go, JavaScript

Observability: Prometheus, Grafana, ELK / EFK, Nagios, OpsGenie

Experience

Netskope Inc.

Apr 2025 – present

Senior Site Reliability Engineer

- Operate and support 100+ production Kubernetes clusters via Spinnaker, enabling consistent multi-region rollouts with zero-downtime deployments.
- Design and maintain Prometheus/Grafana observability stack with automated alerting (Slack, OpsGenie), reducing MTTR by 40% across production systems.
- Maintain CI/CD pipelines (Jenkins, Drone CI, Spinnaker) as code, standardizing build/deploy workflows across the organization.
- Implement GitOps workflows using ArgoCD for declarative Kubernetes deployments with auto-sync and self-healing capabilities.
- Lead incident response and blameless postmortems with global SRE teams, driving reliability improvements and reducing repeat incidents.

Amazon Web Services

Aug 2022 – Apr 2025

Cloud Support Engineer – Linux (Tier-3 Escalation)

- Resolved complex EC2, networking, and OS-level failures for enterprise customers as a Tier-3 Linux escalation engineer under AWS Premium Support.
- Built Python-based internal automation tools using AWS services, reducing manual intervention by 40% across the support workflow.
- Troubleshoot critical OS boot failures, performance bottlenecks, and network issues on EC2 instances under high-severity SLAs.
- Implemented infrastructure provisioning using Terraform, CloudFormation, and AWS CLI, improving provisioning reliability for customer environments.
- Led critical customer launches, authored RCAs, and supported large-scale production events.

Xminds Infotech Pvt. Ltd

Jul 2021 – Aug 2022

Senior DevOps Engineer

- Managed on-prem and cloud-hosted Linux servers across AWS, GCP, and DigitalOcean.
- Introduced Docker-based containerization for Python, PHP, and JavaScript applications, reducing deployment time by 40%.
- Implemented blue-green deployments on Kubernetes, ensuring zero-downtime application updates.
- Provisioned AWS infrastructure using Terraform, cutting provisioning time by 30%.
- Automated CI/CD using Bitbucket Pipelines and GitHub Actions, achieving 60% faster deployments and eliminating manual deployment errors.

- Configured and maintained Linux networking services including DNS, DHCP, VPN, and NFS across production environments.
- Automated RPM and DEB package creation and deployment, achieving a 99.9% successful deployment rate.
- Developed Shell and Python automation scripts, reducing manual operations by 70%.
- Designed Jenkins-based CI/CD pipelines and implemented Nagios monitoring, cutting deployment time by 50% and reducing downtime by 40%.

Education and Certifications

University of Calicut, Kerala, India

Bachelor of Computer Applications – 2017

Certifications

- RedHat - Red Hat Certified System Administrator(170-247-605)
- RedHat - Red Hat Certified Engineer(170-247-605)
- AWS - AWS Certified Solutions Architect Associate(badge)
- AWS - Elastic Compute Cloud (EC2 - Linux) Subject Matter Expert(badge)

Projects

K8sweep

github.com/j1shnu/k8sweep

- Go-based terminal UI for cleaning up Kubernetes pods interactively. Automated releases via GitHub Actions with cross-platform binary builds.

Jenkins Job Management Bot

github.com/j1shnu/TeleJenBot

- Telegram bot for triggering and monitoring Jenkins jobs remotely, enabling on-call engineers to manage builds without desktop access.

System Administration Tools

- Built a cross-platform database backup & restore GUI using Python (Tkinter), reducing engineer intervention by 60%.
- Created custom Ubuntu ISOs with preconfigured tooling, reducing system setup time by 60%.
